

Mindflight7 enables your students to interact in the unlimited world of virtual reality.

There are currently over 40 interactive virtual reality adventures for each student to choose from.

They may decide to:- explore their career options, perform heart surgery, travel many light years out into space, create and design in 3D in their own warehouse space or invite other students into their space to create with them, get up close to wild animals or choose one of the many other experiences.

The friendly facilitators will guide your students through their virtual reality experiences, answer and ask questions that will prompt discussions that will link learning back to school-based studies.

Regardless of the adventures they choose, Mindflight7 will have your students learning as they play.

Mindflight7 - Australia's educational technology specialist.

If students choose one of the environmental science virtual reality worlds they'll learn about different ecosystems, biodiversity, climate change and of the many conservation efforts currently being implemented around the world.

This virtual reality technology takes participants on an exciting journey of exploration, introducing them to a wide range of careers, industries and hobbies they may never have known existed.

What others have said: The individual and personalised nature of the experience promoted excellent engagement and work-related skills for the future. *Luke Watson. Kent Street High School. WA.*

Students were highly engaged and had a really positive experience with MindFlight7.

Mitchell Bradbury. Bethel Christian College. Mount Druitt. NSW.
